

HATCH PREDICTION

Predict the number of eggs that will hatch!

Hatch rate refers to the percentage of eggs that hatch from a “set” placed in an incubator at one time. Because not all eggs in a set were laid or fertilized at exactly the same time, and because not all incubators provide perfect conditions 100% of the time, there is no guarantee that every egg placed in an incubator at once will hatch.

Write one complete sentence about your predicted hatch rate (*I predict that...*):
