

DESIGN A PIG BARN

PROBLEM:

Pigs need a healthy, clean, warm place to be raised.

CHALLENGE:

Design a pig barn that meets the needs of pigs.

QUESTIONS TO CONSIDER:

- How will the pigs stay warm?
- Where will the food be stored?
- How will the pigs get food and water?
- Do pigs of all ages stay in same place?

BEHIND THE SCENES:

Keeping the pigs in barns keeps them out varied weather conditions and away from predators and harmful infections and diseases. Barns are kept at a constant comfortable temperature and humidity. Pigs don't have sweat glands and can easily overheat. They are also very sensitive to cold temperatures.
